05 MGX1000 Panel Settings

Button Forwarding Mode

Select the button forwarding mode suitable for your preferred aircraft model. Bind buttons through the game's control system, or allow MOZA Cockpit to directly transmit button inputs to the game.

Lighting Settings

You can adjust the MGX1000 panel backlight effects and select from multiple lighting control modes:

- Device Mode: Brightness responds to analog axis input from other devices
- Telemetry Mode: Brightness adjusts dynamically based on in-game lighting data
- Manual Mode: Brightness is manually controlled within the MOZA Cockpit software

Screen Settings

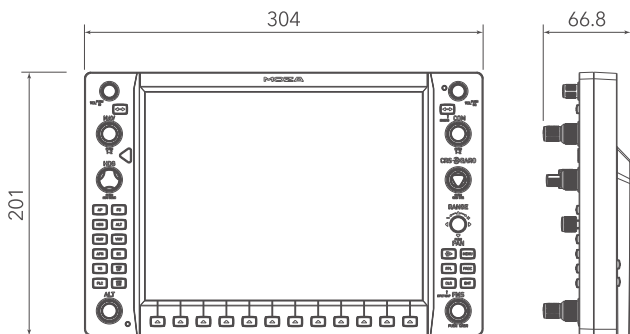

The MGX1000 uses DisplayLink plug-and-play technology. When connected to a PC via USB 3.0, it is recognized as a display. You can adjust the screen settings on the "Display" page in Windows settings.

Please follow the on-screen setup guide within the software to output game visuals to the panel.
